

GREEN CLAY from SICILY:

ARGITAL green CLAY is extracted from a pit not far from the Mediterranean sea in the deep south of Sicily, in an area which is clean, wind-swept and sunny almost all year round.

It is rich in life-giving forces and warm energy absorbed from the sun during the drying process. Its age between 6 and 16 million years, situates it in a geological time in which Earth has been particularly full of vital forces, beneficial forces that ARGITAL CLAY has kept intact throughout the time.

In order to be used during the whole year, ARGITAL GREEN CLAY is dug, sun dried and stored during summer time when the solar power is stronger and more intense. Thanks to this enormous quantity of light and heat, ARGITAL MARINE GREEN CLAY boasts an extraordinary richness. The unique properties of clay make it ideal as a body modelling agent and as a natural anti-ageing product.

CARACTERISTICS/CHEMICAL ANALYSIS:

SILICA (SiO₂) 35.79%

Titanium (TiO₂) 0.62%

Aluminium (Al₂O₃) 11.64%

Iron (Fe₂O₃) 5.00%

Magnesium (MgO) 1.98%

Calcium (CaO) 14.90%

Sodium (Na₂O) 0.73%

Potassium (K₂O) 2.18%

Waste on fire 21.94%

MINERAL ANALYSIS

The principal mineral present in ARGITAL's CLAY are:

SMECTITES,

ILLITES,

CHLORITE,

KAOLINITE,

DOLOMITE,

CALCITE,

QUARTZ,

FELDSPAR.

Cationic exchange capability: 41.6 meq/100gr. This value denotes a good clay's osmotic activity.

Ph: 8.00 slightly basic.

A UNIQUE CLAY FOR MANY GOOD REASONS:

ARGITAL GREEN CLAY is a NATURAL REMEDY containing bivalent iron, a younger iron more effective, that gives the greenish colour to the clay, different from the reddish clays that instead contain trivalent iron.

Our body is only able to assimilate bivalent iron and for this reason ARGITAL has chosen this clay as the basis of its green clay products.

ARGITAL GREEN CLAY is particularly active due to its MARINE ORIGIN and reach of mineral salts and oligoelements.

Clay is a source of well-being for mankind, is the flower of the mineral kingdom and like all flowers, living in the sphere of light, is a bearer of solar forces.

The plasticity of this MARINE GREEN CLAY gives the skin and the hair a very particular sense of softness and elasticity, and the presence of the silica in it irradiates a light that regenerates and tones the skin and the hair.
